9:00 am – 2:30 pm (lunch provided)
406 Malott Hall

Workshop Title

Making the CCSSM Come Alive in Our Classrooms

Overview

The focus of this workshop is on developing a vision of what it means to teach mathematics in the world of CCSSM. Participants will examine “What it means to understand mathematics” and discuss the implications for our instruction, as this is an important part of the CCSSM. We will engage in mathematics experiences from both middle and high school and look at how well these experiences connect both the content standards and the practice standards. Participants will have an opportunity to work collaboratively and then reflect on how their experiences can impact their own instruction.

Presenters

Cindy Callard and Jane LaVoie join us from the Mathematics Outreach Division of the Warner Center at the University of Rochester. Both have been classroom teachers at the middle- and high-school levels, and have worked collaboratively with people regionally and at the state and national levels.

RSVP to Mary Ann Huntley by 2 pm Friday, October 26, 2012
